KuKuRisk

- Benchmarking tool in German language for security and safety of heritage sites/ museums
- Developed by Joanneum Research, MUSIS (Organization of Styrian Museums), and Public Opinion
- <https://kukurisk.at/>

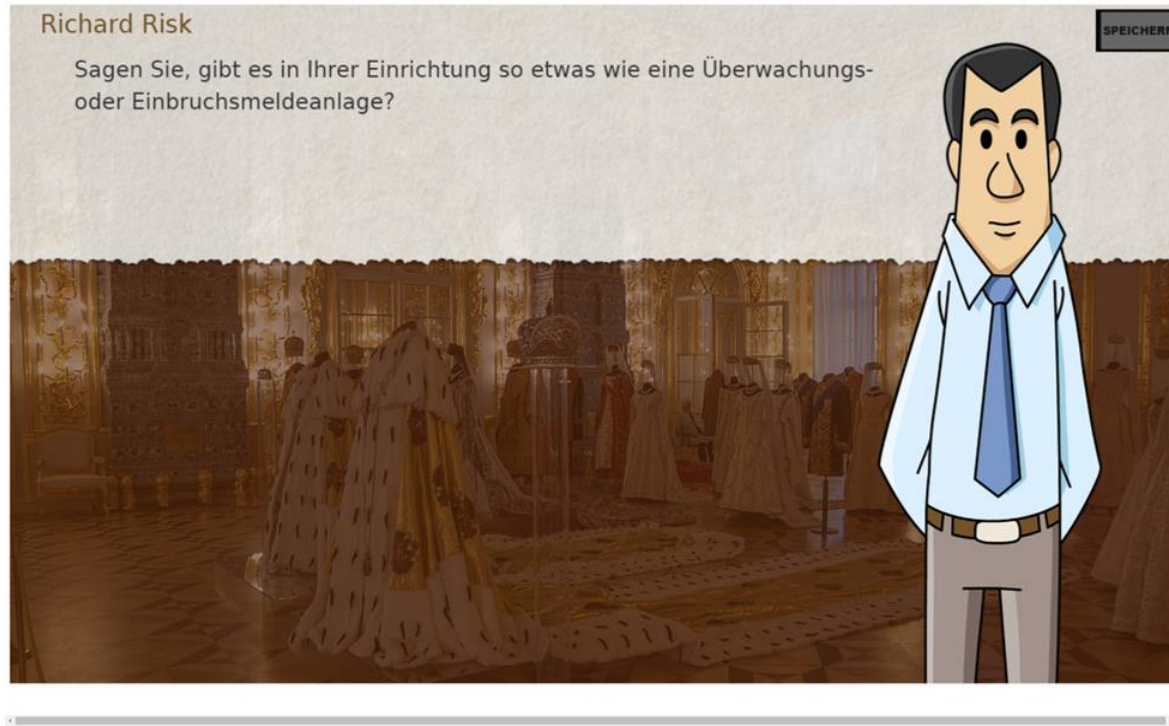

How does it work?

- KuKuRisk functions as a 'game' with a question and answer format
- Covers points of
 - Risk analysis - Wear and tear - Theft - Fire - Acts of violence - Light + climate - Natural phenomena - Pests - Vandalism - Pollution - Management - Water

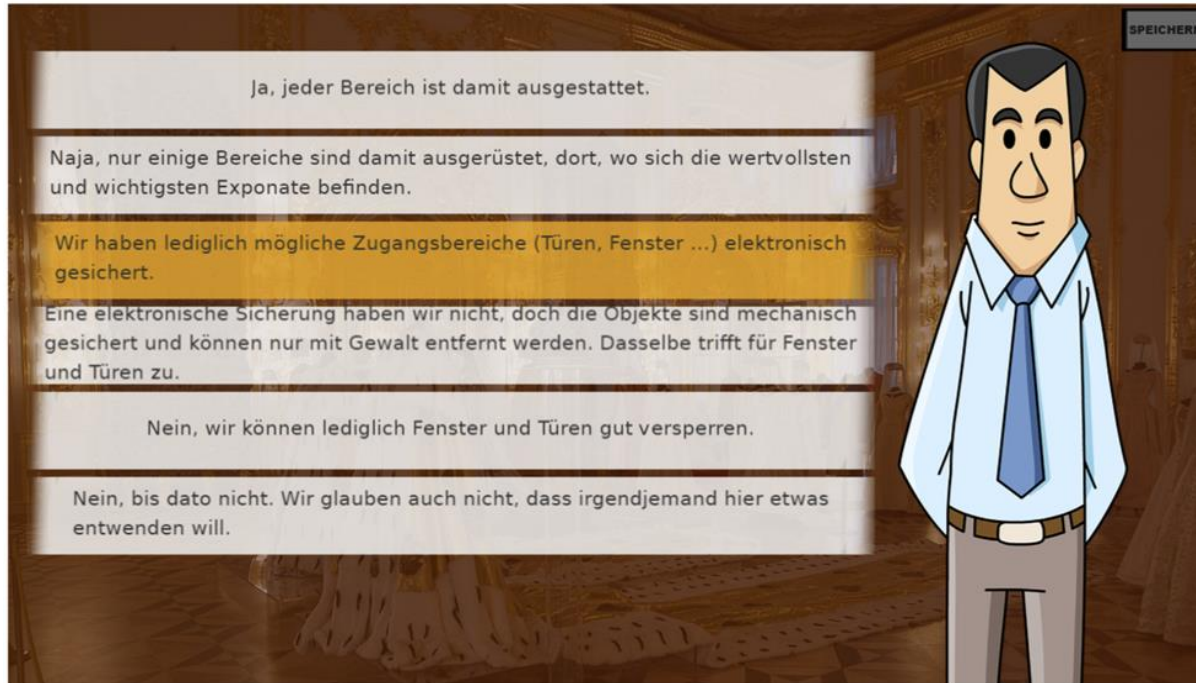

‘Players’ can choose relevant categories

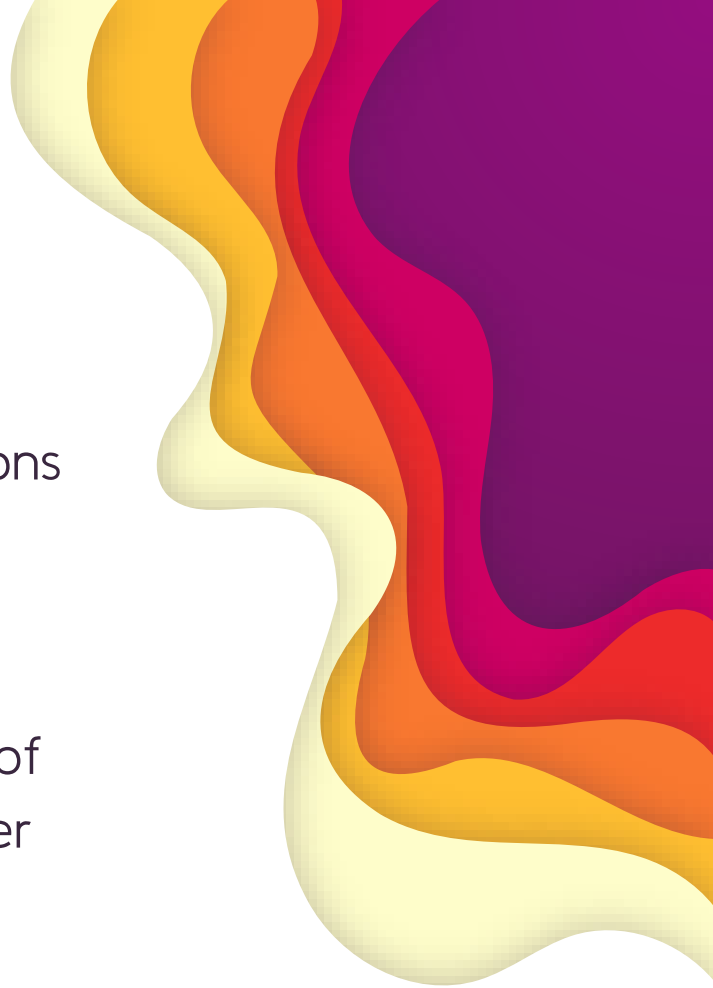

They are then asked questions about their institution by a virtual guide.

They can choose from various answers assessing their museum's security.

How does it work?

- Through the answers, the game evaluates the security of various departments/ sections relating to heritage institutions
 - Provides more info through checklists, videos, etc; adapted for 'everyday use'
- The tool allows institutions to get a sense of their own security, also allows for a broader understanding of the security level among such institutions in Austria

- Offers checklists, suggestions, and handouts
- Tied with the various categories
- Once users know their 'weak' points, they can access info to improve
- Also offers
 - Literature
 - Links to relevant organizations

GRUNDLAGEN

[V_Handlungsleitfaden_Sicherheit_und_Katastrophenschutz_KNK.pdf](#)

Takeaway

- There are creative and nontraditional ways to structure benchmarking
- This format is accessible and attention catching
 - Low threshold
- Provides more info, checklists, etc, for those who are interested

Thank you!
